

Pain Management Resources

MercyOne identifies pain assessment and pain management - including safe opioid prescribing – as an organizational priority with a focus on both managing patient’s pain and minimize the risks associated with treatment. Education and resources are a cornerstone of successful pain management. The assessment and management of pain, both acute and chronic, can present challenges in a hospitalized patient. Below are several resources for providers to facilitate safe pain management, a goal shared by MercyOne and all its associated providers.

The U.S. Department of Health & Human Services
SAFE Opioid Prescribing: Strategies. Assessment. Fundamentals. Education.
